

Dear Parent/Guardian:

Your child's school is required by the California Education Code to administer annual hearing screening tests for students in selected grades. The goal of hearing screenings at school is to identify any students who may have a hearing impairment that warrants follow-up.

Student's Name: _____

Date of Screening: _____

The results of this screening test indicate:

Did not respond to some of the sounds presented at 25 dB HL.

The range of "normal hearing" is 25 dB HL or below. Screening signals are presented at 25 dB HL at four different tones, from low to high pitch (500 – 4000 Hz).

Inconsistent responses or unable to maintain attention for accurate results.

Record of Hearing Screening Test

RIGHT EAR			
500	1000	2000	4000

LEFT EAR			
500	1000	2000	4000

√ = response at 25dB HL

Your child's school is presenting this notification to you as is required by state law.

Please note that this is a screening test only. It is strongly recommended that your child be seen by an ear specialist (eg: audiologist, Ear/Nose/Throat physician) for further diagnostic hearing testing. Your family physician may assist you with this referral. Present this form to the physician or audiologist at the time of evaluation.
